TBIRD VSO2

The TBird VSO2 Series is an advanced ventilatory system. It is designed to move seamlessly with your patient throughout the entire acute care environment, Emergency Room to Operating Room to Patient Room. The TBird employs an advanced turbine delivery system in a compact, durable and lightweight package; TBird series provides uninterrupted mechanical ventilation for your critically ill patient. No longer do you need to change ventilators as you move your patient to perform therapeutic or diagnostic procedures.

Unlike most ICU ventilator systems that depend on an air compressor or a piped air system, TBird Series is self-contained. Its powerful turbine technology provides excellent gas delivery without a need for a compressed air source. This turbine, together with an internal and optional external battery, allows the system to be completely independent and mobile. The TBird Series incorporated important safety features like Apnea backup ventilation automatically activates whenever patient apnea is detected. The internal battery provides emergency power during temporary power outage, or battery power during short duration transport. An optional external battery provides additional backup and power for longer transports. The front panel locking mechanism prevents accidental changes to control settings during movement.

The TBird Series is designed with the user in mind. The pressure manometer bar graph displays real time pressure readings as well as high and low pressure alarm settings. Its color-coded controls and displays are easy to read and set. Central control knob provides one-button operation.

The TBird Series provides the platform for all upgrades and future enhancements. Upgrades can be completed in just minutes by simply changing a Configuration Memory Card. Accommodating numerous mounting options as in a stationary or transport stand, tabletop or nightstand the TBird Series flexibly adapts to the situation. The Seamless Solution® for critical care. The TBird Series offers it all: performance, mobility, flexible mounting, and safety. It is the first and only ICU ventilator designed to take your patient seamlessly through the critical care environment.
